I'm MJ, a Principal Frontend Engineer with 10+ years in product engineering. I own frontend architecture and technical direction: the RFCs, the large migrations, and the testing and observability foundations. I stay hands-on and ship AI products end to end. I also mentor the engineers around me on working well with AI.

PROFESSIONAL EXPERIENCE

Principal Frontend/Product Engineer

Reiner AI • April 2026 - Present

An AI platform for engineering, planning and architecture teams. Sole frontend engineer, owning architecture and technical direction for the entire web platform.

- Set the frontend architecture and ran a staged migration of the codebase to a feature-based structure, with no change in behaviour.
- Built the testing and observability foundations from zero, Playwright E2E plus Sentry dashboards and alerting. E2E CI went from ~6 minutes to ~1.
- Migrated the monorepo from npm to pnpm. Warm installs got ~99x faster, CI installs ~2x, and node_modules shrank 54%.
- Delivered the flagship AI features, tender analysis and human-in-the-loop review, and rebuilt the chat experience. Product and design called the result a step change in quality.
- Owned onboarding and its activation analytics, plus the self-service launch frontend. The funnel gave the team its first real measure of how new users convert.
- Shaped technical decisions across repo boundaries with backend teams, including API contracts and entitlement design.

Skills: React, Typescript, Vitest, Playwright, PostHog, Sentry, Keycloak, OIDC, Websocket, gRPC, OpenAPI, pnpm, feature flags, monorepo, RFC, spec-driven development, Claude Code

---

Principal Frontend/Product Engineer

Mondoo • March 2025 - March 2026

A cloud-native security platform providing visibility, compliance and governance for cloud infrastructure.

- Defined and owned the frontend architecture roadmap, wrote the RFCs, and drove adoption across the codebase, which cut repeated decisions and UI inconsistency.
- Established the team's E2E testing foundation and championed RFCs for code structure, package manager migration and repo conventions.
- Designed and shipped the AI workflow for reviewing and triaging AI-flagged compliance risks, so security teams could validate findings in chat before acting on them.

- Led cross-functional initiatives end to end and raised the team's AI-assisted development practice through internal tools and shared workflows.

Skills: React, Typescript, GCP, Vitest, Playwright, MUI, GraphQL, Websocket, monorepo, RFC, API-first, OpenAPI, ViteJs, Sentry, Datadog, D3, Claude Code, PostHog

---

Principal Frontend/Product Engineer

epilot GmbH • Aug 2021 - Feb 2025

A SaaS platform for utilities, grid operators and solution providers, digitalizing sales, service and grid processes.

- Led the micro-frontend architecture within a serverless AWS environment and contributed across multiple product squads.
- Built the Customer and Installer self-service portals from scratch and launched both on schedule. Leadership had named them critical growth drivers.
- Cut application response time 4x through profiling and performance tuning.

Skills: React, Svelte, AWS, Typescript, NextJS, Jest, Playwright, Storybook, Cypress, Tailwind, GraphQL, monorepo, RFC, API-first, OpenAPI, Websocket, ViteJs, Jotai

---

Senior Frontend Engineer

Azolver • Jul 2020 - Jul 2021

An IT and technology solutions provider focused on reducing costs and improving efficiency.

- Led TRAX, a web-based tracking system, from inception to production launch, and owned both the technical and product roadmaps.
- Built reusable frontend systems for web (Angular) and mobile (Ionic), and mentored new engineers into the team.

Skills: Angular, Ionic, Azure, Typescript, RxJs, NgRx, Jasmine, mentorship, roadmap planning

---

Senior Frontend Developer

Devolon • Aug 2019 - Jun 2020

A software company building web, mobile and payment products for clients across international IT hubs.

- Shipped features for Fixura (P2P lending) and Lentoparkki (licence plate parking), working closely with product owners and UX.

Skills: React, NodeJS, ExpressJS, Nest.js, Typescript, Redux, Docker

---

Lead Frontend Developer

Sava Arman Kish • Oct 2017 - Jul 2019

A cryptocurrency exchange platform.

- Led a team of frontend developers building Bitex, a cryptocurrency exchange platform, and owned technical decisions and delivery coordination across teams.
- Optimised the trading experience for real-time data performance over WebSocket, with NgRx state management and Jenkins CI for the frontend.

Skills: Angular, RxJS, NgRx, Websocket, Typescript, Jenkins, Docker, team management

---

Senior Frontend Developer

Rayvarz Software Eng. • Jul 2012 - Sep 2017

A prominent Iranian enterprise software, consulting and training company.

- Built HR platforms and internal tools for enterprise clients over five years, working across AngularJS and Angular as the stack evolved.
- Owned the full software lifecycle including unit, integration and E2E testing and CI/CD pipelines, and contributed across the stack in C#/.NET and SQL.

Skills: AngularJS, Angular, JavaScript, SASS, Mocha, Karma, Docker, SQL, C#, .Net

EDUCATION

B.S. in Computer Software

Azad University, Iran, Tehran • 2010 - 2012

Associate's Degree in Computer Software

Azad University, Iran, Tehran • 2004 - 2007

VOLUNTEERING | OPEN SOURCE

rtbf.ir

- Implement Chrome and Firefox extensions

Skills: Javascript, CSS, HTML, Chrome Extension

Mentoring on adplist.com

- Mentored 50+ individuals on ADPlist, guiding them in technology, architecture, and career development to foster growth and clarity in their roles.

Skills: problem-solving, technical mentorship
